

ALL4 Digital Solutions

Data is a valuable, expensive, and often under-used resource. We want to help you utilize it effectively.

Why do we do what we do?

We can help you move from a reactive, compliance-focused approach to a more holistic one that gives you confidence in the data. Further, you will have the ability to streamline, removing the manual handling of data from point of collection to reporting and visualization. We will apply your business rules digitally to substitute, transform, aggregate, or flag data for more detailed analysis, providing higher quality data efficiently and consistently.

Well-selected and implemented solutions let your teams devote their time to more value-added activities than manually compiling data for annual agency reporting cycles and corporate metrics reports. Through these solutions you can complete required compliance tasks more easily and shift your focus from administrative efforts to using that data to become more predictive, supporting operational improvements, improving worker safety, and reducing environmental impacts.

What do we do?

We work collaboratively with our clients to develop digital strategies, to identify priorities and requirements for digital solutions (both functional and IT), and to implement and maintain those solutions. We know the vendors in the EHS(Q) space and can save you time in identifying suitable candidates. You can be confident in our suggestions because we are vendor agnostic and focused on helping you and your team select the best fit for purpose solutions.

Who are we?

We are a blend of subject matter experts (multi-media environmental, H&S, quality) and IT professionals working together to deliver sustainable digital solutions. We fill the gap that often exists between the SMEs and the IT vendors and in-house teams. Think of us as translators. We speak your language and can help to communicate your needs throughout the process and beyond.

How can we help?

Defining the problem

Business analysis/digital strategy/requirements gathering and prioritization

Getting support/resources

Preparing a Business Case/ROI

Preparing for the solution-managing change

Developing a Project Plan (timeline, budget) and Communication Plans

Solving the problem

Approach: Waterfall/Agile/Hybrid

Selecting a suitable solution • Designing the solution • Implementing the solution

Delivering the solution

Rolling out the solution

Providing continuous improvement

Supporting the solution
